OFFERING THE MOST COMPREHENSIVE PORTFOLIO OF TRENCHLESS PIPELINE REHABILITATION SERVICES IN THE UNITED STATES
IPR (Inland Pipe Rehabilitation) is the nation’s largest, privately-held, contracting and service provider of trenchless repair and rehabilitation services for water, sewer, manhole and culvert applications. Through its family of trenchless rehabilitation companies, strategically placed throughout the U.S., IPR can cost-effectively and efficiently provide superior solutions for the most difficult problem. These solutions include:

- CIPP (gravity & pressure)
- Pipe Bursting
- SPR-EX Lining
- EcoCast
- TV Inspection & Cleaning
- Construction Management

**A leader in environmentally-friendly trenchless underground solutions**

Now more than ever before, both the public and private sector are seeking an environmentally-friendly solution which minimizes the disruption to the environment. On every project, IPR works hard to minimize the overall environmental impact – from a smaller construction footprint that minimize closures and detours, to an experienced crew trained to work quickly and safely which help reduce the overall carbon footprint.
For the last 30 years, trenchless rehabilitation technologies have steadily gained ground on traditional “dig and replace” methods. IPR was founded, and built, on the core belief that trenchless infrastructure solutions are critical to bringing the nation’s aging and damaged water, sewer, and industrial infrastructure back to standard.

**IPR: The nation’s largest, privately-held, environmentally friendly trenchless underground solutions provider**

We remain focused on being the most environmentally friendly provider by continuing to develop and introduce “green” technologies as part of our product and service offering.

**Pioneering new processes**

As we relentlessly try to improve on the use and efficiency of our existing technologies, such as pipe bursting projects exceeding 42 inches in diameter, investing in epoxy-resin based Cured-In-Place Pipe (CIPP) systems, we are also breaking ground with the introduction of advanced geopolymer liner technologies. To that end, we are well-positioned to offer our customers more than one solution to best fit the project, the budget, and environmental conditions.
THE IPR FAMILY OF COMPANIES

IPR South Central / PM Construction
IPR South Central is the largest pipe bursting contractor in the country. Additionally, this division performs CIPP (for both gravity and pressure pipe), EcoCast and manhole rehabilitation services.
Serving: TX, LA, MS, AR, OK, KS, CO, NM

IPR Southeast
IPR Southeast and its Florida based pipe bursting division continue to expand their services and grow within the southeast region by offering superior support and trenchless solutions. Core services include: CIPP (for both gravity and pressure pipe), EcoCast and pipe bursting.
Serving: GA, TN, NC, SC, AL, FL

IPR Great Lakes
IPR Great Lakes has decades of experience in a wide variety of trenchless rehabilitation options including: CIPP (for both gravity and pressure pipe), pipe bursting, EcoCast and slip-lining. Over time, customers have come to rely on our ability to trouble-shoot unique water and sewer problems by utilizing our Design/Build and Engineering Support services to resolve difficult problems.
Serving: MI, OH, IN, KY, IL, MO, NE, IA, WI, MN, SD, ND

IPR Northeast
In a region historically known for environmentally sensitive areas, IPR Northeast provides trenchless solutions and expert construction management services to meet the needs and demands of some of the nation’s oldest infrastructure. These include: CIPP (for both gravity and pressure pipe), EcoCast, and pipe bursting.
Serving: MD, VA, WV, DE, PA, NJ, NY, CT, MA, NH, VT, ME, RI

IPR Industrial
Based in Knoxville, TN, IPR Industrial places a high level of emphasis on safety while providing trenchless infrastructure solutions to the oil & gas, petro-chem, pulp & paper, food & beverage and industrial processing markets throughout the U.S. IPR crews are certified and trained to work in industrial facilities and support emergency services.
At IPR, we take the issue of safety very seriously. Not only do we offer the safest and most advanced products and services, our workforce is highly skilled and safety certified. As one of the nation’s largest trenchless rehabilitation contractors, we have offices strategically located throughout the United States. IPR Emergency Response crews are on call 24/7 and can be quickly mobilized for unforeseen pipeline repairs.
